

# HARSHAD SHINDE

Python Full Stack Developer

Pune, Maharashtra

| +91 8010159015

| hshinde2405@gmail.com

| [LinkedIn](#)

| [GitHub](#)

## PROFILE

Results-driven Python Full Stack Developer with 8+ months of professional experience architecting scalable enterprise applications leveraging Django, Vue.js, and PostgreSQL. Hands-on experience integrating LLM APIs and capabilities into application workflows, with practical exposure to Groq AI, OpenAI APIs, and Prompt Engineering. Published researcher with 3 peer-reviewed papers in AI applications and healthcare technology. Passionate about solving complex problems, writing clean maintainable code, and delivering innovative solutions with measurable business impact.

## TECHNICAL SKILLS

- Programming Languages: Python, Java, JavaScript, C, C++
- Backend & Web Frameworks: Django, Django REST Framework, FastAPI, Flask, Spring Boot.
- Frontend & UI Development: Vue.js, React, Next.js, HTML5, CSS3, Bootstrap.
- Databases & Data Management: PostgreSQL, MySQL, Database Design, Query Optimization, Data Analysis.
- AI/ML & Large Language Models: Large Language Models (LLMs), Groq AI API, OpenAI API, Machine Learning, Natural Language Processing (NLP), Prompt Engineering, Classification Models, Vector Search.
- Development Tools & Practices: REST APIs, Microservices Architecture, Git/GitHub, Agile/Scrum, System Design, API Documentation, Database Migration.
- Cloud & Deployment: Supabase, Vercel, Docker (Basic), CI/CD.

## CORE COMPETENCIES

Full-Stack Architecture, REST API Design & Development, Database Design & Optimization, LLM Integration, RAG Systems, Prompt Engineering, Microservices Architecture, System Design, Performance Optimization, Agile Development, Enterprise Software Development.

## EMPLOYMENT HISTORY

### Python Full Stack Developer

Jan 2026 – Present

KodSquad Technologies Pvt. Ltd.

- Developed and enhanced enterprise immigration case management modules using Python, Django, and Django REST Framework, implementing complex business requirements and production-ready backend functionality.
- Engineered dynamic questionnaire workflows with conditional branching, hierarchical question structures, ERI/PERI (Entity Relationship Information/Package Entity Relationship Information) mapping.
- Implemented questionnaire mapping and resolution logic to dynamically determine applicable questions, options, forms, and conditions based on case and packet configurations.
- Developed and maintained RESTful APIs with request validation, exception handling, database integration, and seamless Vue.js frontend communication.
- Designed and optimized PostgreSQL database queries, ORM operations, relationships, and data retrieval logic for complex application workflows.
- Debugged and resolved complex production issues involving database relationships, questionnaire rendering, conditional logic, mapping resolution, data consistency, and backend application behavior.
- Collaborated with development teams on feature implementation, debugging, testing, code reviews, and integration of backend and frontend.

### Java Full Stack Intern

Aug 2024 – Nov 2025

Archer Infotech

- Developed backend services using Java and Spring Boot, contributing to RESTful API development and backend functionality.
- Implemented and tested REST APIs while gaining hands-on experience with backend integration, debugging, and application development.
- Gained practical experience in Java Full Stack Development, Spring Boot, REST APIs, database management, software development lifecycle, and Git-based development workflows.

## EDUCATION

---

### B.E. in Artificial Intelligence and Data Science

2021 – 2025

Dr. D. Y. Patil College of Engineering & Innovation, Talegaon, Pune

- Specialization: Machine Learning | Deep Learning | Data Science | Big Data Analytics | Software Development
- Key Coursework: Artificial Intelligence | Natural Language Processing | Computer Vision | Database Management Systems | Web Application Development | Distributed Computing
- CGPA: 7.71

## KEY PROJECTS

---

### Enterprise Immigration Case Management Platform (Ongoing - Production)

Python, Django, Vue.js, PostgreSQL, REST APIs

- Developed scalable backend modules using Python, Django, and Django REST Framework for an enterprise immigration case management platform.
- Implemented dynamic questionnaire workflows with conditional branching, ERI/PERI mapping, and configurable business rules for complex case processing.
- Designed and developed RESTful APIs with robust validation, exception handling, authentication, and seamless frontend integration.
- Built reusable backend components for document processing, dynamic PDF generation, and configurable form-field mapping.
- Optimized PostgreSQL queries, database relationships, and ORM operations to improve application performance and data retrieval.
- Collaborated with frontend developers to integrate Vue.js interfaces with backend APIs, ensuring responsive and user-friendly workflows.
- Debugged and enhanced production features by resolving complex application issues, optimizing business logic, and improving system reliability.
- Participated in database schema design, feature implementation, code reviews, testing, and deployment within an Agile development environment.

### AI-Driven Healthcare Diagnosis and Treatment System

Python, Flask, MySQL, HTML, CSS, Bootstrap, REST APIs, Machine Learning Models.

- Developed a Healthcare AI and disease prediction system using Python and Machine Learning, applying Supervised Learning algorithms including Random Forest and Support Vector Machine (SVM) for disease classification.
- Implemented an end-to-end machine learning pipeline covering Data Preprocessing, Feature Engineering, Model Training, Predictive Modeling, and Model Evaluation to improve disease classification performance.
- Integrated personalized healthcare recommendations based on Predictive Modeling results, providing an intelligent decision-support experience for users.
- Built a scalable Flask REST API for symptom input, data processing, predictive analysis, and disease prediction, with API Optimization techniques to improve application responsiveness.

### AI Resume Analyzer & Career Optimization Platform

Next.js, React, Supabase, Groq AI, REST APIs, PostgreSQL, Authentication.

- Developed an AI-powered SaaS platform using Python, LLMs, and Groq AI for intelligent resume analysis, ATS optimization, and personalized career coaching.
- Engineered a resume parsing pipeline using NLP and Machine Learning techniques to extract skills, work experience, education, and certifications from uploaded resumes.
- Implemented an ATS Optimization and scoring algorithm to identify critical keyword gaps, evaluate resume relevance, and generate actionable improvement recommendations
- Integrated Groq AI APIs with Prompt Engineering techniques to generate personalized interview questions, career insights, and coaching feedback based on resume content.
